2 Introduction

Background

The Data Analytics Reconciliation Tool contains information currently available for collection from FIS in a variable CSV file format. DART is available to merchants acquired by FIS. This document contains information pertaining to:

- 313 Funding Reconciliation File

This data file replaces the legacy Worldpay Funding Reconciliation Report.

Purpose

The purpose of this document is to:

- outline the format and content of the 313 Funding Reconciliation file
- detail the design and technical specification

2.1 Points of Reference

Further assistance on any Card Scheme matters may be obtained by contacting the address shown below:

3 Network Connections

3.1 Network Connection Options

DART utilises the network communication options detailed in the Direct Communications Technical Specification (available separately).

3.2 General

DART allows management information relating to transactions processed by FIS to be collected electronically.

3.3 Data integrity / Security

The data file contains a header record, a file date and a record count. Merchants are advised to ensure that each file collected is intact by performing a check of the record count and file trailers where applicable.

3.4 Connection Failure

Merchants are advised to arrange an alternative connectivity for data collection in the event of a connection failure.

3.5 Data File Retention

DART files are retained in the Merchant's server account for seven calendar days from creation after which they are archived.

3.6 Data File Names

Please note occurrences of SSSS within data file names in this document refer to your unique Merchant acronym.

4 Communication Links

4.1 General

The collection of DART files requires network management procedures for both FIS and the Merchant.

4.2 Requirements

The following requirements must be considered:

- The transmission sessions are always merchant initiated
- Communication lines should be duplicated and use a variety of routes to cater for network failures

4.3 Data Format

All files are in standard ASCII csv format when collected over a standard network connection.

5 General Information on the 313 Funding Reconciliation File

5.1 File Structure

All fields are positional and of variable length. The file structure is dependent on the structure of the data processed during the processing run.

5.2 Reconciliation

The creation date of the file is contained within the file name, allowing the merchant to collect a backlog of files if needed. Current files are available on a rolling seven-day basis

5.3 Availability

Files are produced 7 days per week, including Bank Holidays.

Appendix A Data File Layouts
